DESCRIPTION:

Adakveo (crizanlizumab-tmca) is a humanized monoclonal antibody, which binds to P-selectin and blocks interaction with ligands, including P-selectin glycoprotein ligand 1. Normally, the translocation of P-selectin to the activated endothelial cell surface results in adhesion of sickle erythrocytes to vessels and the development of vascular occlusion. By binding to P-selectin, Adakveo inhibits interactions between endothelial cells, platelets, red blood cells, and leukocytes, which results in decreased platelet aggregation, maintenance of blood flow, and minimized sickle cell-related crises.
