DESCRIPTION:
Spaced-Retrieval (SR) is a memory intervention that gives individuals practice at successfully recalling information over progressively longer intervals of time. The goal of SR is to enable individuals to remember important information for clinically meaningful periods of time.

EXCLUSIONS:
There is insufficient evidence in the current peer-reviewed, published medical literature to support the use of spaced retrieval training as a monotherapy for any application at this time. The use of this modality as a “stand-alone” therapy for cognitive impairment and/or memory-recall impairment is considered experimental, investigational, and unproven and is NOT COVERED.
