Policy: Genetic Testing for BRCA1, BRCA2 and PALB2 for Breast or Ovarian Cancer

II. Purpose/Objective:
To provide a policy of coverage regarding Genetic Testing for BRCA1, BRCA2 and PALB2 for Breast or Ovarian Cancer

III. Responsibility:
A. Medical Directors
B. Medical Management

IV. Required Definitions
1. Attachment – a supporting document that is developed and maintained by the policy writer or department requiring/authoring the policy.
2. Exhibit – a supporting document developed and maintained in a department other than the department requiring/authoring the policy.
3. Devised – the date the policy was implemented.
4. Revised – the date of every revision to the policy, including typographical and grammatical changes.
5. Reviewed – the date documenting the annual review if the policy has no revisions necessary.

V. Additional Definitions
Medical Necessity or Medically Necessary means Covered Services rendered by a Health Care Provider that the Plan determines are:

a. appropriate for the symptoms and diagnosis or treatment of the Member's condition, illness, disease or injury;
b. provided for the diagnosis, and the direct care and treatment of the Member's condition, illness disease or injury;
c. in accordance with current standards of good medical treatment practiced by the general medical community.
d. not primarily for the convenience of the Member, or the Member's Health Care Provider; and
e. the most appropriate source or level of service that can safely be provided to the Member. When applied to hospitalization, this further means that the Member requires acute care as an inpatient due to the nature of the services rendered or the Member's condition, and the Member cannot receive safe or adequate care as an outpatient.

Medicaid Business Segment
Medical Necessity shall mean a service or benefit that is compensable under the Medical Assistance Program and if it meets any one of the following standards:

(i) The service or benefit will, or is reasonably expected to, prevent the onset of an illness, condition or disability.
(ii) The service or benefit will, or is reasonably expected to, reduce or ameliorate the physical, mental or development effects of an illness, condition, injury or disability.
(iii) The service or benefit will assist the Member to achieve or maintain maximum functional
capacity in performing daily activities, taking into account both the functional capacity of the Member and those functional capacities that are appropriate for members of the same age.

**Triple negative breast cancer**: a cancer negative for expression of estrogen and progesterone receptors, and for overexpression of HER2 receptors

**Blood Relatives**: NCCN defines blood relative as first- (parents, siblings and children), second- (grandparents, aunts, uncles, nieces and nephews, grandchildren and half-siblings), and third degree-relatives (great-grandparents, great-aunts, great uncles, great grandchildren and first cousins) on same side of family

**DESCRIPTION**: Approximately 5-10% of all breast and ovarian cancer can be attributed to a dominantly inherited susceptibility. Mutations in two genes, BRCA1 and BRCA2 are associated with much of the inherited forms of breast and ovarian cancer.

**INDICATIONS**: The Plan considers molecular susceptibility testing for hereditary breast and ovarian cancer (HBOC) (BRCA1 and BRCA2 including sequencing and large rearrangement testing, aka BART testing) medically necessary in ANY of the following indications:

**Members with a personal history of breast cancer and any of the following:**

1. Breast cancer diagnosed at age 45 years or younger; or
2. Bilateral breast cancer or two breast primary breast cancers with the first breast cancer diagnosed at or prior to age 50 years; or
3. Breast cancer is diagnosed at age 50 years or younger with one of the following:
   a. At least one first, second, or third-degree relative with breast cancer at age 50 years or younger; or
   b. At least one first- second-, or third degree blood relative with epithelial ovarian cancer/fallopian tube/primary peritoneal cancer at any age
   c. At least one first- second-, or third degree blood relative with pancreatic cancer; or
   d. At least one first- second-, or third degree blood relative with prostate cancer (Gleason score ≥7);
4. Triple negative breast cancer diagnosed at age 60 years or younger
5. Breast cancer diagnosed at any age, with one of the following:
   a. two or more first- or second-degree blood relatives with breast cancer and/or epithelial ovarian cancer/fallopian tube/primary peritoneal cancer at any age; or
   b. two breast primaries and at least one first, second, or third-degree blood relative with breast cancer at age 50 years or younger; or
   c. two breast primaries and at least one first, second, or third-degree blood relative with epithelial ovarian cancer/fallopian tube/primary peritoneal cancer at any age; or
   d. a first, second, or third-degree male blood relative with breast cancer; or
   e. a first, second, or third-degree blood relative with a known BRCA1 or BRCA2 mutation; or
   f. two or more first- or second-degree blood relatives with pancreatic adenocarcinoma at any age
   g. ethnic descent associated with deleterious mutations (e.g. founder populations of Ashkenazi Jewish, Icelandic, Swedish, Hungarian, or Dutch)

**Members with a personal history of epithelial ovarian cancer/fallopian tube/primary peritoneal cancer**

**Members with a personal history of pancreatic adenocarcinoma**

**Members with a personal history of prostate cancer (Gleason score >7) at any age with:**

1. One or more first- or second-degree blood relatives with breast cancer and/or epithelial ovarian cancer/fallopian tube/primary peritoneal cancer, or pancreatic or prostate cancer (Gleason score >7) at any age; or
2. One or more first- or second-degree blood relative who has a BRCA1 or BRCA2 mutation.

**Members without a personal history of breast cancer, ovarian cancer/fallopian tube/primary peritoneal cancer, or pancreatic adenocarcinoma, but with a known mutation in a cancer susceptibility gene in the member, or within the family**

Confirmatory testing and counseling for known variants (including 185delAG, 5382insC, or 6174delT).
Members without a personal history of breast cancer, ovarian cancer/fallopian tube/primary peritoneal cancer, or pancreatic adenocarcinoma, but with a family history of any of the following:

1. First or second-degree blood relative with a history of breast cancer diagnosed at 45 years or younger
2. First or second-degree blood relative with a history of breast cancer diagnosed at 50 years or younger with any of the following:
   - An additional primary including bilateral disease or two or more clearly separate ipsilateral primary tumors
   - One or more first or second blood relative with breast cancer at any age
   - An unknown or limited family history
3. First or second-degree blood relative diagnosed <60 y with a triple negative breast cancer
4. First or second-degree blood relative diagnosed at any age with any of the following:
   - One or more first, second, or third-degree blood relative with breast cancer diagnosed before 50 years of age
   - Two or more first, second, or third-degree blood relatives with breast cancer
   - Two or more first, second, or third-degree blood relatives with breast cancer primaries on the same side of family
   - One or more first, second, or third-degree blood relative with invasive ovarian cancer/fallopian tube or primary peritoneal cancer
   - Two or more first, second, or third-degree blood relatives with pancreatic cancer or aggressive prostate cancer (Gleason score >7) at any age
   - first, second, or third-degree male blood relative with breast cancer
   - An individual of ethnicity associated with higher mutation frequency (e.g. Ashkenazi Jewish) no additional family history may be required
5. First or second-degree blood relative with a history of invasive ovarian cancer (including fallopian tubes and primary peritoneal cancer)
6. First or second-degree blood relative with a history of pancreatic cancer or prostate cancer (Gleason score >7) at any age with one or more first or second-degree blood relatives with breast and/ovarian cancer and/or pancreatic or prostate cancer (Gleason score >7)
7. Personal and/or family history of three or more of the following (especially if early onset):
   - Pancreatic cancer
   - Prostate cancer (i.e., Gleason score >7)
   - Brain tumors
   - Endometrial cancer
   - Thyroid cancer
   - Kidney cancer
   - Sarcoma
   - Adrenocortical carcinoma
   - Hamartomatous polyps of GI tract
   - Diffuse (multiple primaries) gastric cancer

**Therapeutic companion testing:**

BRCA testing using an FDA-approved companion diagnostic is considered medically necessary when the following criteria are met:
- The member has a diagnosis of cancer; and
- The specific therapeutic is FDA-approved and treatment eligibility is dependent upon BRCA1/2 testing (e.g., Members with ovarian cancer who are considering treatment with Lynparza or Rubraca; members with metastatic breast cancer who are considering treatment with Lynparza)

**PALB2 mutation testing:**

The Plan considers full sequence analysis molecular testing for PALB2 mutation to be medically necessary when ALL of the following are met:
- The member is 18 years of age or older
- Member has met criteria for BRCA1/2 analysis;
- Member tested negative for BRCA1/2

The Plan considers known familial mutation analysis for PALB2 mutation to be medically necessary when ALL of the following are met:
- The member is 18 years of age or older
- A mutation in PALB2 has been identified in 1st, 2nd, or 3rd degree relative(s)
Genetic testing is appropriate only when offered in a setting where a licensed or certified genetic counselor* or adequately trained health care professional is able to provide appropriate pre- and post-test genetic counseling, and medical necessity is supported by ALL of the following criteria:

1. The information is needed to adequately assess risk in the member; and
2. The information will be used in the immediate care plan of the member; and
3. Pedigree analysis establishes that the insured individual is in a high risk group for the disease; or
4. Clinical presentation of symptomology is evident and diagnosis cannot be established with conventional evaluation testing.

*A genetic counselor is considered by the Plan to be qualified if the following are met:

- M.S. or Ph.D. degree from a genetic counseling program approved/certified by the American Board of Genetic Counseling or the American Board of Medical Genetics
- Board certified or board qualified/eligible in the orderly process of obtaining board certification by the American Board of Genetic Counseling or American Board of Medical Genetics
- Proof of current competence and demonstrated ability (minimum of two years recent and continual experience within the past three years).

EXCLUSIONS:

- Genetic testing for BRCA1 or BRCA2 mutations on those less than 18 years of age is considered experimental, investigational, and unproven.
- Testing of unaffected individuals with no significant family history of cancer or no known genetic mutations in the family is considered not medically necessary.
- Genetic testing to assess the risk breast or prostate cancer in men without breast cancer is considered experimental, investigational, and unproven.
- The use of CHECK2 testing is considered experimental, investigational, and unproven. These tests have not been validated for clinical use and have a substantial error rate. They are not able to provide information that is appropriate for medical management and are therefore NOT COVERED.

Note: A complete description of the process by which a given technology or service is evaluated and determined to be experimental, investigational or unproven services is outlined in MP 15 - Experimental Investigational or Unproven Services or Treatment.

PROCESS:
The Plan will utilize available published, peer reviewed medical literature, independent technology assessment program reports and/or review by the Geisinger Clinic Technology Assessment Committee to evaluate the following criteria when assessing the validity and efficacy of a specific genetic test:

- The analytical power of a test determined by its sensitivity and specificity is established.
- There is evidence of defined outcome measures that permits conclusions concerning the effect on health outcomes.
- The net health outcomes benefit of the test as compared to established alternatives is evaluated if applicable.
- The availability of test to membership is evaluated.
- The appropriate governmental and/or professional regulatory body approval is established.
- The test result will influence the treatment or alter the management of the insured individual medical care plan.
- The test result has the capability to confirm a diagnosis when conventional medical evaluation is equivocal.

Note: A complete description of the process by which a given technology or service is evaluated and determined to be experimental, investigational or unproven is outlined in MP 15 - Experimental Investigational or Unproven Services or Treatment.

CODING ASSOCIATED WITH: Genetic Testing for BRCA1 or BRCA2 for Breast or Ovarian Cancer

The following codes are included below for informational purposes and may not be all inclusive. Inclusion of a procedure or device code(s) does not constitute or imply coverage nor does it imply or guarantee provider
Reimbursement. Coverage is determined by the member specific benefit plan document and any applicable laws regarding coverage of specific services. Please note that per Medicare coverage rules, only specific CPT/HCPCS Codes may be covered for the Medicare Business Segment. Please consult the CMS website at [www.cms.gov](http://www.cms.gov) or the local Medicare Administrative Carrier (MAC) for more information on Medicare coverage and coding requirements.

LINE OF BUSINESS:
Eligibility and contract specific benefits, limitations and/or exclusions will apply. Coverage statements found in the line of business specific benefit document will supersede this policy. For Medicare, applicable LCD’s and NCD’s will supersede this policy. For PA Medicaid Business segment, this policy applies as written.
