Education:
Widener University
**Medical and Surgical
NaProTECHNOLOGY® Training:**
Pope Paul VI Institute, Omaha, Neb.

Creighton Model FertilityCare™ System and Medical and Surgical NaProTECHNOLOGY® available

FertilityCare is a very effective system of natural family planning; yet, it is truly much more. When a couple charts the woman's cycle, her chart becomes a critical part of her reproductive care. It enables physicians to identify gynecologic health problems and is foundational to both the evaluation and treatment of subsequent problems. Through individualized follow-up sessions, clients receive a comprehensive and individualized approach to their care.

Geisinger Holy Spirit OB/GYN is one of only a handful of medical practices in the country where women can benefit from both medical and surgical NaProTECHNOLOGY®, an emerging health science that allows for the monitoring and maintaining of a woman's reproductive health. Besides its effectiveness as a system for both achieving and avoiding pregnancy, it is also very effective in evaluating and treating infertility, recurrent pregnancy loss, endometriosis, irregular periods, pelvic pain, PMS, perimenopausal symptoms, ovarian cysts, and polycystic ovarian syndrome.
