MyCode
participants

Patient-
participants

533

Expected
to get a
result

The number of MyCode participants whose exomes have already been sequenced through Geisinger's partnership with Regeneron Genetics Center and the results of which have been made "research-ready."

The number of patient-participants who have had exome sequencing results returned to them so far – meaning disease-causing gene variants were found in the MyCode "DiscovEHR" Study; these were verified by an independent, certified lab and that information was returned to the patient through established protocols.

3.5%

The estimated percentage of MyCode participants who are expected to receive a clinical result indicating that they have a disease-causing variant or variants in one or more of their genes.
